When: afternoon and evening

Where: school

Who: Gerard Vilanova, teacher and digital education trainer

Technical needs: screen, Internet connected computer and projector

Contact: ticactiva@gmail.com

Web: www.ticactiva.cat

Summary

Since the mobile technologies became popular, children have changed their relationship with school, family and friends. Adults have also transformed their family, professional and social life. New dynamics related to information access, communication, learning and knowing have appeared and are being settled down, sometimes with pain. However, digital and media education is still a challenge for the educational world, as these devices and services are available and served to children and adults without any prior prevention, education nor training.

Content

The activity consists on a quiz, a presentation and a chat.
